

Worst UI: Facebook

Why Facebook's UI is Worst:

1. **Cluttered and Overloaded:**

The home screen is filled with too many things — ads, stories, reels, suggestions, and notifications — which confuses users.

2. **Complex Navigation:**

Important settings and privacy options are buried deep, making it hard for users to find them easily.

3. **Inconsistent Design:**

Different sections (like Marketplace, Reels, Groups) look and behave differently, breaking the consistency.

4. **Too Many Distractions:**

Frequent pop-ups, alerts, and “people you may know” prompts disturb the main user experience.

5. **Performance Problems:**

The app often feels heavy, slow, and battery-draining — especially on mobile devices.
